

Wood is a natural product and can be affected by water and heat, causing warping or splitting. Follow the guidelines below to obtain maximum service life from your timber benchtop.

Care Instructions:

- ✓ **Use clean, warm, soapy water**, then wipe dry with a microfibre cloth.
- ✓ **Use a heat resistant surface such as a tile or mat** when placing items from the oven/stove directly onto your benchtop. Although heat resistant, extreme temperatures may damage your benchtop.
- ✓ **Always use a cutting board**. Never cut directly on your benchtop.
- ✗ **Avoid hitting your benchtop with anything blunt or heavy**, as this can cause dents or ruptures.
- ✗ **Do not use solvents or abrasive cleaning agents** that may wear away the protective resin coating protecting your benchtop.
